

Web Collaboration

Expand your communication capabilities while decreasing meeting costs!

Impress your clients and business partners with this sophisticated, yet easy to use technology that provides a cost-effective and convenient way to conduct business meetings and presentations from your desktop. Change your average desktop computer screen into a virtual meeting place!

IVAN's Web Collaboration service is a cross-platform solution that integrates data, audio, and video to allow interactive Web meetings with anyone, anywhere. Requiring nothing more than a browser and a telephone, IVAN offers the most comprehensive, flexible, and dynamic communication environment on the Web. It also enables users to share presentations and documents, lead Web tours, and share any desktop application.

Instantly meet with anyone in the world

- Give a presentation to anyone in the world.
- Allow anyone in the meeting to view, annotate, or edit any document online.
- Share any application or share the entire desktop.
- Take meeting participants on a Web tour by controlling their desktop browser.
- Use integrated teleconferencing or voice over IP.
- Add the use of live video to personalize the meeting.
- Record an entire meeting for later reference, training, or demos.

Collaborators will be...very happy!

Use IVAN's Web Collaboration services to power highly interactive meetings that improve efficiency in sales, marketing, training, customer service, engineering, project team collaboration, and business development. Consider the benefits of conducting meetings on the Web and expanding your communications capabilities, while decreasing meeting costs.
